## GLASSAN BED

### ABOUT THE MANUFACTURED PRODUCT:

This product was crafted from solid walnut wood through an artisan, eco-friendly process without the use of chemicals, achieving the highest expression of true cabinetmaking. A natural oil was applied for an open-pore finish, which allows the wood to breathe while enhancing its natural characteristics.

### CARE AND RECOMMENDATIONS:

The product must be kept free from prolonged moisture or outdoor environments. It is essential that the final product is kept away from contaminating agents—such as other objects affected by pests—and from low-quality woods prone to infection.

- Do not use water or damp cloths to clean the wood.
- Use natural wood oil to moisturize the natural wood.
- The customer is responsible for any damage to the product resulting from improper care or misuse.

### ASSEMBLY:

Organize the pieces in the location where your bed will be positioned. Stand the headboard upright and secure the two side rails to it using the hardware, tightening the nuts firmly. Then, attach the footboard in the same manner.

If your bed is Queen or King size, it will include an extra center support piece. Position the legs underneath the side rails, inserting them into the designated holes; secure the extra center piece to the legs using the provided screws. Next, attach the legs to the side rails.

Finally, place the slats and the metal tubes that fit over them to prevent movement.
